

Snoopy Inu

Whitepaper

General Overview

Snoopy Inu (\$SNOOP) has solid tokenomics to ensure maximum growth on the avalanche network. The main function of the dog-house-riding savage is achieving a true burn mechanism (built in the frame of his dog house), which enables \$SNOOPY (Burn Address) to keep acquiring tokens and thus increase token scarcity and generating constant upwards price action.

We are aiming to be at the forefront of innovation and a top market cap token on the avalanche network. This will be done by implementing unique utilities, fresh marketing plans and consistently giving back to the community.

How it works:

The Snoopy Inu buy and sell taxes are the following:

Buy: 10% liquidity fee, 4% marketing fee, 1% dev fee

Sell: 14% liquidity fee, 5% marketing fee, 1% dev fee

The high liquidity tax is what makes up the unique and deflationary tokenomics used by this token! Every hour, a portion of our massive liquidity pool will get used to buyback and burn tokens, and this percentage will be based on the current size of the liquidity pool. If this pool ever gets too big, we have a manual burn mechanism that we can use to initiate a buyback and burn of up to 10% of the current liquidity pool size.

Features:

Automatic Burns Every Hour

This is one of the unique features that has been coded to grow \$SNOOPY through the contract taking a small percentage of liquidity from the pool, buying back tokens, and sending them to the burn address decreasing circulating supply.

Anti-Dump

The high liquidity tax assures that the liquidity pool will always remain healthy giving the Snoopy Inu community protection against massive price dumps.

Anti-Whale

Max buy will be 1% of supply for the first hours following launch with a max wallet of 1.5% to ensure a healthy holder ratio and avoiding whale selloffs.

Security

The contract liquidity will be initially locked for 3 months and will be extended upon reaching milestones.

The contract has hard coded features to ensure that it can't be abused or rug pulled such as: limiting manual burn percentages to a max of 10% and limiting tax increase to a max of 25% which makes it impossible to block-sellers.

We have ensured that everyone who invests into our project is protected by any malicious activity and can feel safe without having to rely on blind trust but rather permanent features coded onto the blockchain.
